

natura  
**POWER**

WHEN YOU NEED MORE!

ENERGY CHUNKS,  
ENERGY SAUSAGE & ENERGY CREAM

# ENERGY CHUNKS, ENERGY SAUSAGE & ENERGY CREAM

HIGH PROTEIN, ENERGY & POWER

## QUESTION 1

**When are naturaPOWER energy chunks, energy sausage and energy cream used?**

The three products from naturaPOWER help dogs develop more strength and stamina for important situations. Be it for sport, hunting, a race or work which requires the utmost concentration. They have been specially developed to help your four-legged friend achieve a consistent performance over a long period of time.

## QUESTION 2

**Which dogs are the products suitable for?**

The naturaPOWER energy chunks, energy sausage and energy cream are suitable for all breeds of dog. Even dogs that are not involved in competitive sports, but who are at an advanced age, will particularly appreciate the benefits. They also support breeding bitches during pregnancy and aid recovery after birth.

## QUESTION 3

**How does naturaPOWER support your customers' four-legged friends?**

The energy chunks, energy sausage and energy cream are made of raw materials that naturally support energy metabolism, fat burning and the regulation of hormone balance during intensive exercise. The snacks have a high biological value due to the large proportion of fresh meat.

## QUESTION 4

**What ingredients are used for naturaPOWER?**

All products are made from high quality ingredients: The energy chunks are made from Swiss chicken meat, potato starch, pea protein, salmon oil, vitamins, trace elements and ImmunoCell3Active® (yeast-based nucleotides, herbs).

The energy sausage is made from Swiss chicken meat, potatoes and ImmunoCell3Active® (yeast-based nucleotides, herbs). For the energy cream, we use Swiss chicken meat and animal by-products, water, ImmunoCell3Active® (yeast-based nucleotides, herbs) and rapeseed oil.

## QUESTION 5

**What is ImmunoCell3Active®?**

ImmunoCell3Active® is a combination of essential yeast-based nucleotides. Nucleotides are the smallest building blocks of every human and animal cell and support the body with regeneration.

There are three ways to obtain the vital nucleotides:

- The body is able to recover some of the nucleotides contained in dying cells and use them to build new cells.
- Many cells can produce nucleotides themselves. This excludes the intestinal villi, the immune system and the brain.
- The body absorbs and metabolises nucleotides through our daily nutrition.

**Analytical constituents of the energy chunks:**

230 g/kg raw protein	15 g/kg calcium
120 g/kg raw fat	10 g/kg phosphorus
3.5% crude fibre	3850 kcal/kg energy
5.5% crude ash	

# FOR MORE ENDURANCE WITHOUT ARTIFICIAL ADDITIVES

The body is usually supplied with sufficient nucleotides through the aforementioned extraction process. But if the immune system is put under additional strain by illness, accident, pregnancy, stress or competitive sport, then the body is no longer able to supply itself with the amount of nucleotides that it actually needs.

The consequences can be multifaceted:

- Digestive problems, diarrhoea, allergies, slow recovery after heavy exercise, no increase in performance despite training or even a decrease in performance, extended recuperation after surgery, poor wound healing.

This is why naturaPOWER energy chunks, energy sausages and energy cream all contain ImmunoCell3Active® to support your customers' four-legged friends in every situation.

## Analytical constituents of the energy sausage:

90 g/kg raw protein	2.5 g/kg calcium
52 g/kg raw fat	3.3 g/kg phosphorus
1.7 % crude fibre	1320 kcal/kg energy
2.9% crude ash	

## QUESTION 6

### How many naturaPOWER energy chunks can be fed?

Two to four energy chunks can be fed per hour during periods of activity. Otherwise, four chunks spread over the day.

## QUESTION 7

### How many naturaPOWER energy sausages can be fed?

One to two energy sausages can be fed per hour during periods of activity. Otherwise, two sausages spread over the day.

## QUESTION 8

### How much naturaPOWER energy cream can be given to the dog?

During periods of activity, 10 cm can be fed twice per hour. Otherwise, 5 cm fed four times throughout the day.

All three snacks are completely grain-free making them suitable for dogs with a gluten intolerance !

## Analytical constituents of the energy cream:

73 g/kg raw protein	0.4 g/kg calcium
105 g/kg raw fat	1.2 g/kg phosphorus
0.6 % crude fibre	1350 kcal/kg energy
0.8% crude ash	

## YOUR BENEFITS WITH NATURAPOWER

High-quality ingredients from A to Z

Products without artificial additives

Suitable for all breeds of dog and all ages

Broad target group  
because the products are versatile

Attractive pricing

Practical and space-saving packaging

Transparent manufacturing processes

Swiss company headquartered in Thurgau

Personal point of contact

Do you have any questions about  
our naturaPOWER products?

We would be happy to personally advise you.
